Market Outlook

The global macroeconomic landscape has shifted dramatically this past week. In the US mid-term elections, Democrats gained control of both the House and the Senate, creating fresh political dynamics. Meanwhile, the US Federal Reserve paused rate hikes despite a 3.7% headline inflation rate and a 9.1% spike in retail gasoline prices. Commodity markets saw sharp volatility as Brent crude corrected rapidly to around $95 per barrel, down from approximately $117 last weekend. Geopolitically, despite significant electoral setbacks for President Donald Trump and Prime Minister Benjamin Netanyahu, the outlook regarding the conflict with Iran remains highly uncertain.

Concurrently, a stark re-evaluation of the technology sector is underway. Massive, front-loaded capital expenditures on AI hardware and data centers are being increasingly funded through debt and off-balance-sheet positions without immediate revenue offsets. Fearing an overextended AI trade, institutional smart money is pivoting away from pure software plays. This triggered a major Wall Street sell-off, plummeting the PHLX Semiconductor Index by nearly 15% and wiping 4.2% off the Nasdaq 100 in the final three trading days of October. As tech giants such as Amazon, Alphabet and Meta delivered underwhelming earnings, capital rotated into defensive equities and physical AI infrastructure, including power grids and cooling systems.

Compounding global pressures, China's economic momentum has weakened considerably. The benchmark CSI 300 Index plunged into a technical bear market after an 8.5% monthly drop, marking its worst monthly slide since the 2015-2016 crashes. This downturn was mirrored in macroeconomic data, as China's official manufacturing PMI unexpectedly fell to 49.3, slipping back into contraction. The non-manufacturing PMI similarly weakened to 49.7, signaling structural slowdowns across construction and service sectors.

In contrast, our conviction in Indian equities remains absolute on a decade-long horizon; India represents the premier structural bull run and the best growth story globally. Supported by prudent fiscal consolidation, India remains the most favorable destination for global capital, particularly within the "China+1" framework.

As an anti-AI trade emerges, India stands poised to outperform by remaining largely insulated from the crowded AI trades of 2026. The worst is now behind us. Accordingly, our portfolio construction strictly avoids over-owned, admired territory. Instead, we are aggressively capturing value in under-owned, under-researched and neglected stocks to deliver resilient, long-term outperformance. We are prioritizing liquid positions, and maintaining a disciplined short book to tactically exploit corrections. Thank you for your continued trust.

Systematic Active Investing

Active Strategies, Systematic Precision

Systematic Active Investing (SAI) is an investment style that combines the structural discipline of passive investing with the adaptability and insight of discretionary active management. At its core, it is a structured, rules-based decision architecture that is both conviction-driven and risk-aware

At quant, SAI forms the strategic backbone of qsif, enabling dynamic positioning across long-short portfolios with the objective of delivering steady performance through market cycles. All investment decisions originate from measurable signals derived from price behaviour, market microstructure and macro cycles, with real-time data integration and multi-factor modelling

It leverages machine intelligence, advanced analytics, and human insight to

identify opportunities across asset classes	construct resilient portfolios	manage risks with precision

PASSIVE INVESTING forgoes responsiveness	SYSTEMATIC ACTIVE INVESTING **operates within a disciplined, repeatable and adaptive framework**	DISCRETIONARY ACTIVE INVESTING often depends on episodic human judgment

> Systematic Active Investing is the operating system that powers our long-short conviction: a high-integrity, low-latency, multi-layered architecture that seeks to deliver asymmetric returns with institutional robustness

MARCOV

OUR PROPRIETARY FRAMEWORK

Our unique analytical framework for enabling 'Predictive Analytics' encompasses all available asset classes and sectors, formulating a multi-dimensional research perspective

Why multi-dimensional? Because the markets are a complex, dynamic system. We have found consistent success by studying markets along six dimensions as opposed to limiting ourselves to any one school of thought

MICROSTRUCTURE ANALYTICS
Reading the market's pulse beneath the price

ALTERNATE DATA ANALYTICS
Finding signals where others see noise

RISK ANALYTICS
Sizing exposure before uncertainty takes form

CYCLES ANALYTICS
Catching the turn before it is visible

OBJECTIVITY ANALYTICS
Let ng facts outvote bias

VOLATILITY ANALYTICS
Using disorder to refine direction

qsif
cross asset, cross market
offered by quant mutual fund

High Frequency Analytics (HFA)

high-frequency data, transformed into strategic edge

Financial markets are no longer a simple reflection of real economic output. They have evolved into hyper-connected, multi-layered systems where liquidity, sentiment, and cross-asset correlations create complex and often nonlinear dynamics. The periodic dislocations witnessed in recent decades illustrate that the health of the system is as much a function of liquidity flow as of underlying productivity

Volatility clustering models further refine exposure bands, ensuring that agility does not come at the cost of stability, and that drawdown containment coexists with convex upside capture

HFA reads this fabric at its highest resolution, drawing upon

- trade-level data
- depth dynamics
- liquidity gradients
- sentiment drifts
- volatility clusters

HIGH FREQUENCY ANALYTICS

- quantifies order flow toxicity
- tracks liquidity fractures
- anticipates adverse selection
- aligns execution with natural liquidity rhythms

to reveal the subtle inflexion points that precede regime change

Our investment framework MARCOV addresses this by integrating high-frequency indicators through our **High Frequency Analytics (HFA)**. Within MARCOV, HFA acts as the timing oracle, the real-time intelligence layer that synchronises predictive signals with market reality

quantamine — THE PLATFORM

objectivity is our religion, data is god

quantamine is a fully integrated, in-house intelligence and execution architecture engineered for latency-sensitive multi-asset strategies. Designed as the central nervous system of the firm's investment operations, it unifies risk, compliance, investments, and operations into a frictionless, coordinated workflow

It ingests heterogeneous, high-dimensional datasets on macroeconomy, microstructure, sentiment, liquidity, and volatility into a single actionable layer, utilising advanced pattern recognition models to detect regime shifts, liquidity stress points, and microstructure anomalies, dynamically recalibrating risk exposure in real-time

quant: PROVEN POWERHOUSE FOR HIGH-CONVICTION LONG–SHORT INVESTING

Deep Market Expertise & Leadership Experience

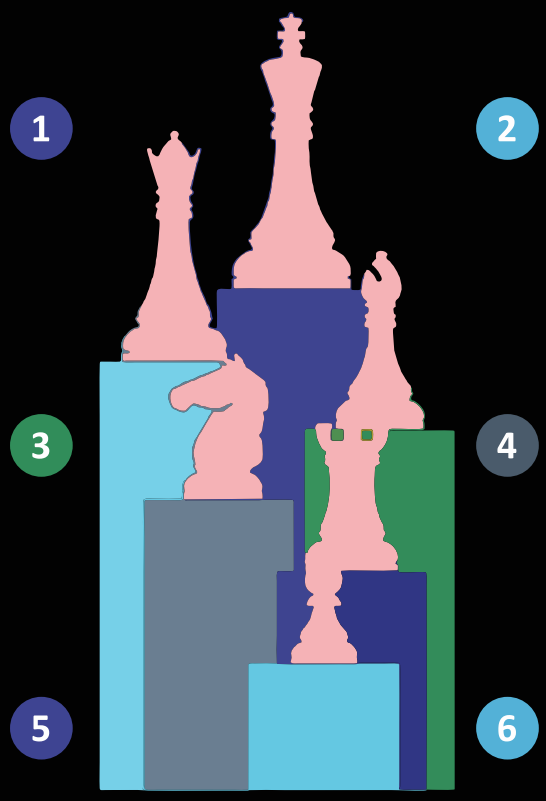

Led by one of India's earliest institutional players in the derivatives and Badla markets, quant's Founder & CIO, Sandeep Tandon, brings unmatched expertise in quantitative research and multivariate investment strategies. His decades of leadership, combined with the team's experience across long-short equity, statistical arbitrage, and volatility arbitrage, ensure deep domain mastery that few in the market can rival

Proven Track Record

quant Mutual Fund is the fastest-growing AMC in India, delivering outsized outperformance across schemes in past 5 years. The current equity MUM of INR 1,03,000+ crore has grown from INR 35 crore in 2020 and have huge investors base of 1 crore+ folios

Robust, Evolving Investment Framework

Through quant's indicator suite — Risk Appetite, Liquidity, Money Flow, Perception, and Volatility Analytics — the investment process continuously adapts to changing market cycles. This enables resilience and adaptability in both volatile and stable environments, crucial for long–short strategies

Advanced Data & High Frequency Capabilities

In its previous avatar, quant was an early adopter of co-location in India, launching a high-frequency trading desk that processed billions of data points with nanosecond precision, turning them into actionable strategies. From 2008 to 2018, quant's proprietary trading and facilitation desk consistently delivered absolute returns, demonstrating strong strategy execution and risk management

Relentless Dynamic Management

quant has been a pioneer of dynamic management in the Indian mutual fund industry, building its philosophy around constant portfolio calibration and swift decision-making

Seamless Integration of Tech & Human Expertise

quant's **Systematic Active Investing** approach uniquely merges algorithmic rigor with the conviction of seasoned portfolio managers. This hybrid model allows swift response to market shifts without losing the depth of discretionary insight, a critical edge in dynamic long–short positioning

How To Read qsif Factsheet

About the Investment Strategy: This section describes the manner in which the fund proposes to invest its corpus across various instruments and strategies in order to achieve its stated investment objective, within applicable regulatory limits.

Investment Style: Investment Style indicates the broad approach adopted by the fund.

Inception Date: Inception Date refers to the first date of allotment of units to the investors of the fund.

Relative Weights: Relative Weights show the difference between the fund's exposure and the benchmark exposure across securities or segments, indicating areas of overweight or underweight positioning.

Asset Allocation: Asset Allocation shows how the fund's investments are distributed across asset classes such as equity, debt, and other instruments as on the stated date.

Contribution by Market Cap: This section displays the allocation of equity investments across large-cap, mid-cap, and small-cap companies.

Fund Managers: Fund Managers are employees of the asset management company responsible for managing the investments of the fund.

Benchmark Index: A Benchmark Index is a reference index against which the performance of the fund is measured to assess how it has performed relative to a comparable market standard.

Load Structure: Load Structure specifies the entry and/or exit charges, if any, applicable to investor transactions. For instance, if the NAV is Rs. 100 and the exit load is 1%, the redemption price would be Rs.99 per unit.

NAV Details: NAV or Net Asset Value is the per-unit value of the fund after deducting permissible expenses. It is calculated at the end of each business day and is the price at which investors enter or exit the fund.

Expense Ratio: Expense Ratio represents the annual expenses charged to the fund for managing and administering investments. These expenses are adjusted in the NAV and directly impact investor returns over time.

Risk Band: Risk Band indicates the level of risk associated with the fund as categorised by AMFI, helping investors assess suitability based on their risk appetite.

Investment Objective: Investment Objective states the purpose of the fund and the nature of returns it seeks to generate over the long term, as defined in the Investment Strategy Information Document (ISID).

Fund Size: Fund Size, also referred to as Assets Under Management (AUM), represents the total market value of investments managed by the fund as on the stated date.

Monthly Fund Commentary: Monthly Fund Commentary provides the fund manager's perspective on market conditions and summarizes key portfolio actions undertaken during the month.

Top 10 Unhedged Positions: This section lists the ten largest investments of the fund that are not hedged, providing insight into securities where the fund has higher direct exposure.

Daily Long-Short Equity Exposure (%): This section reflects the daily equity exposure of the fund, including long exposure (positions that benefit from an increase in prices) and short exposure (positions that benefit from a decrease in prices).

Daily Portfolio Beta: Portfolio Beta measures the volatility of the fund relative to the market. A beta lower than one indicates lower volatility than the market, while a beta higher than one indicates higher volatility.

Portfolio beta based on NAV returns can lag actual market exposure, particularly in actively managed strategies involving derivatives or long–short positioning. We calculate beta bottom-up using the daily equity holdings. To better capture current market sensitivity, individual stock betas are estimated using an exponentially weighted moving average (EWMA), which gives greater weight to recent price movements and adapts faster than traditional historical averages. Widely used by active equity and hedge strategies globally, it is well suited for actively managed portfolios evolving exposures. A variance floor based on long-term benchmark volatility is applied to avoid distortions during low-volatility periods. The Nifty 500 Total Return Index is used as a broad-market reference to ensure stock and portfolio betas are consistent and comparable across funds. Investors should interpret this beta as a point-in-time measure of market exposure rather than a return forecast, and as one input in assessing overall portfolio risk.

The Long-Short SMID

qsif Equity Ex Top 100 Long-Short Fund

An open-ended equity investment strategy investing in listed equity and equity related instruments including limited short exposure in equity through derivative instruments, outside the top 100 stocks by market capitalization.

qsif
cross asset, cross market
offered by quant mutual fund

qsif Equity Ex Top 100 Long-Short Fund

India's 1st SMID Fund with long-short flexibility

Open-ended · Benchmark **NIFTY 500 TRI** · Inception **12 November 2025**

POSITIONING

A SMID cap strategy positioned beyond India's top 100 companies, dynamically rebalancing between small and mid caps while retaining the flexibility to short up to 25% and to step into large caps when conditions demand it

WHY TO INVEST

1

Expanded sources of return

Captures opportunity through tactical and strategic longs and opportunistic shorting, beyond those available to long-only approaches

2

Downside protection

The short book reduces overall portfolio beta and provides a buffer against losses during broad market downturns

3

Large cap flexibility

In extreme risk-off situations, exposure to large cap stocks can be increased to optimise risk-adjusted returns

INVESTMENT STRATEGY

65–100% **SMID cap cash equity / equity arbitrage**	0–35% **SMID cap unhedged derivatives (Long)**	0–25% **SMID cap unhedged derivatives (Short)**
0–35% **Large cap long-only**	0–100% **Hedging**	0–15% **Margins (Cash, T-bills, G-secs)**

High Moderate Minimal

Minimum equity exposure (long + short) will be 65%

INVESTMENT OBJECTIVE

To generate long-term capital appreciation by investing primarily in equity and equity-related instruments of stocks outside the top 100 by market capitalization, while utilizing limited short exposure through derivatives to enhance returns and manage risk. There is no assurance that the investment objective of the Investment strategy will be achieved.

RISK BAND

*The Risk Band has been as specified by AMFI.

MONTHLY FUND COMMENTARY

During the month, from a portfolio optimization point of view, we have increased large cap exposure. We continue to focus on SMID (Small and Mid-Cap) segments which are under-owned, under-researched, and undervalued, often offering highly attractive entry valuations and some IPO opportunities. Month-end portfolio is skewed towards mid-caps followed by large-caps and small-caps. The portfolio has a high active share versus benchmark with overweight stance on telecom & healthcare and underweight stance on financial services. During the month, the fund maintained an average equity deployment (Long + short) of approximately 94%, average unhedged long exposure: ~89%, average short exposure: ~5%, average net exposure: ~84%, month-end portfolio beta: 1.09.

Interval strategy · Benchmark **40% NSE 500 TRI + 30% CRISIL Short Term Bond Fund Index + 30% iCOMDEX Composite Index** · Inception **21 April 2026**

POSITIONING

A multi-asset strategy that treats allocation itself as the source of alpha, dynamically rebalancing across equity, debt and commodities — cross asset, cross market — so the timing burden never sits with the investor

WHY TO INVEST

1
Adapts to changing conditions
Active allocation instead of static exposures, adapting to macro changes such as interest rates, inflation and liquidity

2
Reduces drawdowns
Cuts exposure to overheated or high-risk segments during periods of market stress

3
Multiple return drivers
Dynamically shifts between equity, debt and commodities, instead of relying on a single asset class

MONTHLY FUND COMMENTARY

The qsif Active Asset Allocator Long-Short fund is designed to navigate market cycles, combining equity for potential growth, debt for relative stability and commodities for a play on inflation. From an equity allocation standpoint, the fund is overweight on Telecom & FMCG while remaining underweight on financial services. Large cap exposure is highest followed by small cap and mid cap. The fund remains highly agile and managed dynamically based on high frequency analytics. During the month, the fund maintained an average equity deployment (Long + short) of approximately 59%, average unhedged long exposure: ~57%, average short exposure: ~2%, average net exposure: ~55%, month-end portfolio beta: 0.68. Exposure to Gold Derivatives taken during the month.Debt exposure at ~7%.

A New Reality: Flexi Cap strategy with 25% short exposure

Open-ended · Benchmark **NIFTY 500 TRI** · Inception **07 October 2025**

POSITIONING

A flexi cap strategy that brings globally accepted long-short investing into the transparency and accessibility of a mutual fund structure: market capitalisation agnostic, with beta managed through a 25% shorting option

WHY TO INVEST

1

Efficient Beta Management

Enhanced portfolio diversification, reducing dependence on broad market movements

2

Lower drawdowns during consolidation

Steadier performance than long-only, through opportunistic short positions with negative correlation to market returns

3

Additional alpha from short positions

Flexibility to short asset classes expected to underperform, and during market consolidation phases

*The Risk Band has been as specified by AMFI.

MONTHLY FUND COMMENTARY

During the month, fund maintained an average of 36.2x Long-Short Ratio compared to 5.5x in the prior month in view of a pull back rally in Indian equities. The portfolio allocation is higher towards large cap followed by mid cap and small cap. Being a flexi long-short fund, we are actively managing the market cap and sector allocations based on the near to medium term outlook. As on month end, we are overweight on telecom & healthcare while we remain underweight on financial services. We are turning more constructive on the large cap space following underperformance over past many months and will further rebalance the exposure dynamically at appropriate inflexion points. During the month, the fund maintained an average equity deployment (Long + short) of approximately 93%, average unhedged long exposure: ~90%, average short exposure: ~3%, average net exposure: ~87%, month-end portfolio beta: 1.07.

qsif Hybrid Long-Short Fund

India's 1st Hybrid Long-Short Fund

Interval strategy · Benchmark **Nifty 50 Hybrid Composite Debt 50:50 Index** · Inception **15 October 2025**

POSITIONING

A conservative hybrid strategy built on three engines — arbitrage accruals, investment-grade fixed income, and unhedged long-short equity — aimed at returns above debt without the swings of pure equity

WHY TO INVEST

1

Balanced across market cycles

Blends debt, arbitrage and long-short equity, offering a smoother ride through both bullish and bearish phases

2

Returns with downside protection

Market-neutral strategies capture opportunities in rising and falling markets, while debt and arbitrage cushion sharp declines

3

Steady, superior risk-adjusted returns

Aims to deliver returns higher than debt funds while avoiding the extreme swings of pure equity

INVESTMENT STRATEGY

35–65%
Equity arbitrage / all cap cash equity (Long)

0–40%
All cap unhedged derivatives (Long)

0–25%
All cap unhedged derivatives (Short)

25–65%

INVESTMENT OBJECTIVE

This investment strategy aims to achieve a blend of capital appreciation and income generation by maintaining a balanced exposure to equity and debt instruments, with a minimum of 25% in each, while utilizing up to 25% in short derivative positions to enhance returns and manage risk. There is no assurance that the investment objective of the Investment strategy will be achieved.

RISK BAND

*The Risk Band has been as specified by AMFI.

MONTHLY FUND COMMENTARY

By integrating directional equity exposure with fixed income and yield-generating assets, qsif hybrid long short strategy helps cushion portfolio against elevated equity volatility while enhancing return predictability and downside protection. Within equities, the fund is overweight on Telecom while remaining underweight on financial services. During the month, the fund maintained an average equity deployment (Long + short) of approximately 58%, average unhedged long exposure: ~57%, average short exposure: ~1%, average net exposure: ~56%, month-end portfolio beta: 0.68. For the debt portion, Yield to Maturity (YTM) is 6.74%, Modified Duration is 0.30 year, Macaulay Duration is 0.31 year and Average Maturity is 0.34 year. Debt exposure excluding Tri-Party Repos (TREPS) is ~25% of which 36% has a AAA rating, 34% has a Sovereign rating and 30% has AA+ rating. Fund has exposure to InvITs to the extent of ~7%.

qsif Sector Rotation Long-Short Fund

The Long-Short Sectoral Fund (Focused)

Open-ended · Benchmark **NIFTY 500 Total Return Index TRI** · Inception **15 May 2026**

POSITIONING

A focused business cycle strategy that takes a view on sectoral cycles rather than market direction: a maximum of four sectors, each held long or short in full

WHY TO INVEST

1
A focused sectoral thesis
Expresses a view on sectoral cycles rather than relying on overall market direction

2
No sector timing burden
Removes the investor's decision of when to rotate between different sectoral funds

3
Alpha from both directions
Shorting sectors expected to face strong headwinds, alongside a portfolio of high-conviction longs

INVESTMENT OBJECTIVE

To achieve long-term capital appreciation by concentrating investments in equity and equity-related instruments of up to four high-potential sectors, while employing limited short exposure through derivatives to capitalize on sector-specific downturns and enhance risk-adjusted returns.

RISK BAND

Strategy	Benchmark (as applicable)
	

*The Risk Band has been as specified by AMFI.

MONTHLY FUND COMMENTARY

Markets are cyclical and different sectors lead at different times. The gap between the best and worst performing sectors in a single quarter frequently exceeds 30%. The solution is an active investment strategy which can go long on sectors expected to outperform and go short on sectors expected to witness drawdowns. During the month, largely a long bias was maintained. The fund has exposure towards Healthcare, Telecom & FMCG. The fund maintained an average equity deployment (Long + short) of approximately 90%, average unhedged long exposure: ~72%, average short exposure: ~0%, average net exposure: ~72%, month-end portfolio beta: 0.84. Some positions were hedged resulting in a lower unhedged long exposure.

Direct plan. Returns: for more than 1 year are annualized (CAGR). Past performance may or may not be sustained in the future. Source: Ace MF & qGR as on 31-Oct-2026.

No. of Schemes that Outperformed the Benchmark of quant MF Equity & Hybrid Schemes

A scheme counts as outperforming when its own return exceeds its benchmark over the same period, each scheme against its own benchmark. Only schemes with a record for that period are counted, so the denominator falls as the horizon lengthens. Direct plan. Returns: for more than 1 year are annualized (CAGR). Past performance may or may not be sustained in the future. Source: Ace MF & qGR as on 30-Oct-2026.

quant mf schemes: risk-o-meters
